

# Living a more Sustainable and Climate-friendly life

Doing our part to save the planet from human-caused destruction is ultimately our responsibility.

---

## Living Sustainably

To live a more environment-friendly life means making daily choices that reduce our negative impact on the environment.

## Go Zero Waste

The general idea is to reduce the amount of trash we produce. That means only consuming what is needed, refusing single-use plastics, reusing what can be reused, and recycling what can be recycled.

## Support Local

Buying from local farmers, producers, and shops reduces our carbon footprint because less pollution is created during transport. It also helps the local economy grow and thrive.

# SIMPLE WAYS TO REDUCE YOUR CARBON FOOTPRINT AT HOME

Let's help make the world a better place by changing our lifestyle habits to reduce carbon emissions.

1.

Ensure that your appliances are in good working condition. This practice maximizes efficiency and uses less energy.

2.

Make sure all faucets are not leaking, and don't leave them running when not in use. Every drop counts!

3.

Turn off and unplug all appliances when not in use.

4.

Lessen the use of single use plastics.

## MANAGE YOUR WASTE!

- Reuse any items that can be repurposed in other ways.
- Reduce the items you use. What can you do away with?
- Recycle items properly.
- Repair items when possible instead of buying new ones.
- Resell items you don't need but are still in good condition.

The Ohio State University**

The background of the entire page is a close-up photograph of parched, cracked earth. The cracks are deep and irregular, forming a network of polygonal shapes across the surface. The color is a mix of light tan and dark brown, with some small green plants starting to grow in the cracks.
